

2019-2020 Columbus & Franklin County Seasonal Influenza Activity Weekly Summary (Week 9, Feb. 23rd, 2020– Feb. 29th, 2020)

Highlights

- In week 9 of 2020, individual flu activity indicator trends were mixed compared to last week, but values continue to be elevated. Overall, local flu intensity (composite indicator) decreased (third week in a row) slightly compared to last week and remains HIGH.
- Geographic spread and local intensity designation (Click [here](#) for definitions) = WIDESPREAD, HIGH
- Local medical facility labs reported 2,864 tests run with 722 (25.2%) positive results for week 9 of 2020.
- The percentage of ED visits for both influenza-like-illness (ILI) and respiratory symptoms were stable compared to last week.
- In week 9 of 2020, the majority of trends for individual local over-the-counter medication category sales tracked increased (increase in cough and cold, electrolyte, chest rub, pediatric anti-fever, adult anti-fever, and throat lozenge sales; stable thermometer sales) compared to last week.
- In week 9, U.S. key indicators that track flu activity remain high but decreased for the third week in a row. Please [visit the CDC website for specific information](#).

Local Flu Activity Dashboard *(All data are preliminary and may change as updated reports are received.)*

Reportable Conditions (Cumulative Numbers as of Mar. 5, 2020)	2015	2016	2017	2018	2019	2020 YTD
Pediatric Influenza Associated Death Reported by Year (based on date of death)	0	0	0	0	1	0
Influenza Associated Hospitalizations (IAH) Reported by Admission Year ⁶	447	293	846	1,036	843	628
<i>IAH comparison by Flu Season (October through May or Weeks 35 - 20)</i>	<u>2014-15</u>	<u>2015-16</u>	<u>2016-17</u>	<u>2017-18</u>	<u>2018-19</u>	<u>2019-20*</u>
<i>*Current season figures (2019-20) are from week 35 through week 9 of 2020.</i>	871	265	619	1,235	746	729

¹Interpret with caution. Indicators with small numbers subject to large weekly percentage fluctuations.

²Number of weeks "▲" = Increase (>2%), "▼" = Decrease (>2%), "●" = Stable (-2% to +2%).

³Black line is current years data. Based on data availability, red line is historical average (excluding pandemic year).

⁴Data Source: Medical claims data from athenaHealth® (www.athenahealth.com). Rate of Flu or ILI visits to Ohio (statewide) athenaHealth® network primary care practices/physicians. Claims data are subject to filing and processing time lags. Historical data are updated when they are received.

⁵Franklin County, OH residents only (based on zipcode). NOTE: Excludes one hospital system included in the past due to technical changes affecting visit classification assignment and numbers.

⁶Confirmed cases only. Based on jurisdiction equal to Franklin County or City of Columbus and admission date available in ODRS.

Influenza Morbidity and Influenza-Like Illness (ILI) Reports

In week 9, the preliminary Ohio¹ (statewide) influenza and influenza-like-illness (ILI) visit rate to athenaHealth® primary care providers (35.0 per 1,000 visits) decreased slightly compared to the previous week and is above its baseline average for the week (Figure 1). The week 9 percentage of all Emergency Department (ED) visits categorized as ILI was stable compared to the previous week (Figure 3) and is above its historic baseline for the week.

Nationally, during week 9 of 2020, 5.3% of patient visits reported through ILINet were due to influenza-like illness (ILI). The percentage decreased compared to last week and is above the national baseline of 2.4% for week 9.

Laboratory Surveillance

During week 9 of 2020, reporting Franklin County sentinel medical facility laboratories tested 2,864 specimens, with 722 (25.2%) positive (Figure 4). The total number of tests done by local reporting labs from week 35 of 2019 through week 9 of 2020 is 49,433 with 10,859 (22.0%) positives (4,374 type A, 6,345 type B, 0 type A and B, 140 type unknown).

Nationally in week 9 of 2020, clinical laboratories reported 44,491 specimens tested for influenza viruses, 10,829 (24.3%) of which were positive (7,821 type A, 3,008 type B). In week 9, public health laboratories reported testing 1,594 specimens, 953 of which were positive (629 type A – of which 596 were A(H1N1)pdm09, 30 were H3N2, and 66 were not subtyped; 261 type B – of which 0 were Yamagata lineage, 207 were Victoria lineage, and 54 where lineage was not performed). Please visit the CDC website for more information, including cumulative data.

In week 9 of 2020, Ohio clinical labs reported 67,459 specimens tested for influenza this season thus far. Positive results include: (454) A(H1N1)pdm09; (3) A/H3N2; (7,426) Flu A Not Subtyped, and (7,920) Flu B (through 2/29/2020). In week 9 of 2020, ODH Public Health Lab reported 810 positive influenza tests from various submitters this season so far. Positive results include: (453) A(H1N1)pdm09; (17) A/H3N2; (340) Influenza B (through 2/29/2020). Please visit the ODH website for more information.

ED Respiratory Visits

In the 9th week of 2020, the percentage of all ED visits categorized as respiratory was stable compared to the percentage seen the previous week and is above its baseline for the week (Figure 5).

Over-the-Counter (OTC) Medication Sales

In week 9 of 2020, the majority of trends for individual local over-the-counter medication category sales tracked increased (increase in cough and cold, electrolyte, chest rub, pediatric anti-fever, adult anti-fever, and throat lozenge sales; stable thermometer sales) compared to last week.
